Did you know that...

... the new version of the Energy Performance of Buildings Directive will transform your professional practice?

... it will be necessary to multiply by 12 the renovation of homes and 1 out of every 3 architects will be dedicated to this activity?

... from 2028, the zero-emission building comes into effect?

After the success of the first two editions, **the 3rd 'Decarbonizing Architecture' conference is coming back on October 29**. Mark your calendars!

During the event, we will address the challenges and opportunities brought by the arrival of the new version of the EPBD and the changes it will entail in the state regulatory framework and in the way of practicing the profession. We will talk about new instruments such as the **zero-emission building**, the **global warming potential** and the importance of embodied carbon in construction materials, and about the **renovation passport**, among others.

In addition, we will have national and international architects who will share the strategies used to **integrate environmental requirements** from the first design phase. The goal is to achieve a decarbonized architecture that values ??the territory and local materials.

Together we can make this **paradigm shift** possible: an architecture that fights the climate crisis through the decarbonization of buildings and that, at the same time, improves people's quality of life.

We look forward to seeing you there!

Want more information? On our **new webpage** ^[2] you will find videos, publications, training and other resources about decarbonization. And soon, the detailed program of 'Decarbonizing Architecture 2024'!

9/07/2024
